

**Urgent News: May 28, 2008**  
**ARE CELL PHONES SAFE?**

Leading Experts Once Again Raise Concerns About the Dangers of Cell Phones on **CNN's Larry King Live Show** last night. Is there a link between Cell Phones and Cancer and Tumors? Are the growing number of children and teenagers using Cell Phones leading to a health epidemic?

All these things and more were discussed on the Larry King Live Show by a respected panel, a virtual who's who on the issue of Cell Phone Safety:

- Dr. Keith Black, the head of neurosurgery at Cedars-Sinai Hospital in Los Angeles who treated Johnny Cochran, O.J. Simpson's attorney. Cochran died of a brain tumor in 2005.
- Dr. Sanjay Gupta, a neurosurgeon and CNN's chief medical correspondent.
- Dr. Vini Khurana, an Australian neurosurgeon who recently made headlines with his extensive report on the health risk associated with Cell Phone use saying it is more deadly than smoking and asbestos.
- Louis Slesin, the Founding Editor of Microwave News.

You need to know what they had to say...

**CELL PHONES ARE MORE DANGEROUS THAN SMOKING AND ASBESTOS**

"There's just over three billion users of cell phones worldwide...And, the concern is not just brain tumors, but other health effects associated or reported to be associated with cell phones, including behavioral disturbances, salivary gland tumors, male infertility and microwave sickness." Dr. Vini Khurana

"I think the evidence that is accumulating is pointing towards an effect of mobile phones on tumors. I would not want to be a heavy user of a mobile phone. People might be shocked to hear that the evidence does seem to be coming more strongly in support of harmful effects." Dr. Vini Khurana

**BRAIN TUMORS ARE THE NUMBER ONE CANCER KILLER AMONG CHILDREN IN THE UNITED STATES AND THE SECOND MOST COMMON FORM OF CANCER IN KIDS**

"Teenagers and even younger will be using cell phones for 20 to 30 years, we do not have enough data now to say that it is a safe device." Dr. Keith Black

"A microwave antenna is very similar to a microwave oven. So we don't know what long-term effects that will have on memory as our young adults age and other neurological problems." Dr. Keith Black

**CELL PHONES HAVE BEEN LINKED TO CANCER**

"It is quite possible (that Cell Phone cause Brain Cancer) because we're seeing these kinds of effects in a number of epidemiological studies...studies from northern Europe, from Israel especially from France, from Germany, all point to a risk of cell phone links to brain tumors and neuromas and grand tumors." Dr. Louis Slesin
